

A mango tree can grow to be **100 feet** tall

In the right conditions, mango trees can grow up to 100 feet tall with a canopy of 35 feet or more. Mango tree growth rate, growth stages, and height vary based on soil and weather conditions.

The leaves of a mango tree are leathery, measuring 5 to 16 inches in length, and remain on the tree for several years. Their flowers grow in terminal panicles or clusters measuring 4 to 16 inches in length.
