

WHY DESIGN DECISIONS OUTPERFORM EQUIPMENT CHOICES.

The most expensive mistakes are the
Engineering ones.

EQUIPMENT VS DESIGN

Works individually

01

Connects everything

Can be upgraded

02

Stays for decades

Performs as instructed

03

Decides daily efficiency

Follows the layout

04

Controls success or failure

** Equipment executes. Design commands.*

ENGINEERING REALITY CHECK

You can change equipment in months.
You live with design decisions for **20+ years**.

Note: Real engineering begins before procurement.
