

Hygiene Zoning is NOT Floor Marking

It's About Flow

Hygiene Zoning =

How people, materials &
products move inside the plant

www.pmg.engineering

Wrong (Only Marking)

- Just colored lines on floor
- Anyone can move anywhere
- No real control

Right (Flow Design)

- Fixed movement paths
- Raw → Process → Finished
- Controlled entry & exit
- No mixing of clean & dirty areas

**Flow should always move
forward
(avoids contamination)
No going back !!**

www.pmg.engineering

**Bad flow = Hygiene
problems**

**Good flow = Safe &
audit-ready plant**

www.pmg.engineering

**Don't just mark
zones...**

Control the Movement.
