

Did you know?

India has the lowest meat consumption in the world.

NEXT →

India's meat consumption is very low, which currently stands at 4.5 kg per capita, and globally it is the second-lowest consumer of meat per capita.

In the last twenty years, the rate has grown only by one kg. People now have become more health-conscious and attracted to the health benefits of a vegan diet. India is the second-fastest-growing processed meat and poultry market in the world. Even though two-thirds of Indians consume meat, consumption remained less than 4 kg per person, and it is the lowest in the world.

- But Telangana state records show that 98.8 percent of its people eat meat, which is higher than countries like the United States and Australia.
