

Did you know?

Mushrooms can be used as a Natural Pesticide

Know how

To let crops grow, some insects play a very important role in enriching their nutritious values and some are like cancer to their habitats.

Mushrooms have been used as a natural pesticide for a while to test if they are beneficial for crops to grow healthy along with possessing less risk to useful insects.

Know how

Earthstar is a brownish woodland fungus with a spherical spore-containing fruiting body surrounded by a fleshy star-shaped structure, found in both Eurasia and North America. The developed substance from earthstar could be used to kill the insects that attempt to feast on the crops. So-called SMART pesticides are anti-toxic, which can be a breath of fresh air in the increasingly toxic environment.
