

RAW INGREDIENTS

GENERAL PROVISIONS AND STAPLE FOODS

Raw ingredients are basic materials or components used to make finished products. These are usually unprocessed or minimally processed materials used to create more complex products.

- Includes flour, sugar, eggs, milk, vegetables, meat, and spices. These ingredients are used in various industries, such as food production, cosmetics, pharmaceuticals, etc.
- Raw ingredients may sometimes need testing and certification to meet certain quality standards and regulations.

MARKET SCOPE

- The global food industry is constantly growing and evolving, with increasing demand for safe, healthy, and sustainable food products. This demand drives innovation in the food industry as manufacturers seek to produce food products that meet changing consumer preferences and regulatory requirements.

MAJOR PLAYERS IN MARKET

- Cargill Inc., Archer Daniels Midland (ADM), Bunge Limited, Louis Dreyfus Company, Wilmar International Limited, Glencore International AG, COFCO Corporation, Olam International Limited, Noble Group Limited, and CHS Inc.

COMMERCIAL PRODUCTION

- Generally, involves farming, processing, and distribution activities. The specific processes used depend on the type of ingredient and the industry in which it is used.
- Many companies specialize in producing, sourcing, and distributing raw ingredients, which are then sold to food manufacturers and processors for use in their products.
- The production of raw ingredients often involves significant investment in equipment, technology, and expertise, as well as adherence to environmental and labor regulations.
