

What is an ETP & Why Every **Food Factory** Needs It

ETP (**Effluent Treatment Plant**) treats
wastewater generated from
washing, processing, cleaning, and CIP
operations
before it is discharged or reused.

Why ETP is critical for **FOOD FACTORIES**

Organic Load

Food waste, oils, sugars, starches need proper treatment

Audit Compliance

FSSAI, local PCB, and global food standards expect it

Hygiene Protection

Untreated effluent attracts pests and contamination risks

Water Reuse

Treated water supports utilities and reduces fresh water demand

Brand Protection

Environmental lapses can halt production and damage trust

PMG ENGINEERING

Build World Class Food Factories
